

## PRETREATMENT AND STORAGE TANK

### We provide a full range of pretreatment options:

- Multimedia –To counter feed quality variations
- Hardness Stabilizer Anti sequestering capsule
- 10,5 ,3, 1, 0.5, 0.2 micron pore size depth pre filters
- Combination Cartridge (Activated Carbon Block & silver impregnated granules)for Removal of dissolved gases like Chlorine & adsorption of organics
- Automatic softeners
- Feed Booster pump
- We custom design pre filtration unit according to the feed water conditions

### Importance of Reliable Quality Water Storage

- The quality of pure water degrades over time as storing water can lead to contamination particularly from bacteria. Good design and proper maintenance regimes are needed to minimize these problems. Reservoirs should be protected from air bourne impurities with suitable filters and materials should be chosen which do not contaminate the water.
- Vent filter to prevent the ingress of airbourne impurities particulates, organic vapours and reduce CO<sub>2</sub> levels .
- Cylindrical free from dead ends, Up-gradable to UV photo oxidation and Constructed from inert polyethylene to minimize the release of organics.
- Available in 20L, 50L, 60L and 90L capacities.
